

Color & Additive Masterbatches
Plastic Compounds

Black Compound

Black compound is a very economical and strong black color concentrate which behaves as a cost-saving Black color in a wide range of plastic applications.

Black Compound

Applications:

- Pipes and Fittings
- Injection mouldings
- Films
- Sheets
- Tapes

Advantages:

- Costs-saving black color concentrate
- Excellent color undertone
- Low filter pressure value (FPV)
- Suitable processing behavior
- Special grade for pipe application also available
- Very low dosage addition rate
- Excellent UV blockage
- Low shipping cost due to the high loading level of pigment
- Different grades available due to the customer application
- Very suitable for those who use black compound only as a single black color
- Very special grade for fitting in Polypropylene with high level of Blackness and mechanical strength
